SUMMARY

Full Stack Developer with experience shipping production systems in **TypeScript, Next.js, Node.js, and React Native**. Recent work focuses on **AI agent integration** for business automation alongside core full-stack delivery across web and mobile. Prioritizes clean code, unit and integration testing, and refactoring legacy systems into maintainable code.

SKILLS

- **Languages:** TypeScript, JavaScript, Java (Android), SQL
- **Frontend:** React, Next.js, React Native
- **Backend:** Node.js, NestJS, tRPC, Prisma, REST APIs
- **Data:** PostgreSQL, MySQL, NoSQL
- **AI:** LLM-based agents, business-automation agents, API integrations
- **Practices:** Unit testing, integration testing, refactoring, code review, Scrum

EXPERIENCE

HubXP — Full Stack Developer

Jul 2025 – May 2026 · Remote

- Refactored ~8,000 lines of legacy code — untangling buggy, hard-to-test modules and replacing them with typed, testable units — cutting recurring production defects and unblocking new feature work.
- Designed and shipped **AI agent integrations** powering HubXP's flagship product, embedding LLM-driven workflows into existing client-facing features and surfacing them through the web and mobile clients.
- Owned features end-to-end across the stack: **Next.js** + React frontends, **tRPC** + **Prisma** backend, and a shared **React Native** mobile app — with type safety enforced from database schema through to UI.
- **Stack:** TypeScript, React, Next.js, tRPC, Prisma, React Native, AI agents/LLMs

FutureSecureAi — Full Stack Developer

Feb 2025 – Jul 2025 · Remote

- Built production **AI agents** for business-automation use cases that fed directly into FutureSecureAi's commercial AI-agent product line sold to enterprise clients.
- Onboarded into a large, unfamiliar legacy codebase and integrated multiple new third-party APIs — extending capability without breaking existing flows or destabilizing dependent features.
- Partnered across the engineering team to scope work, pair on hard problems, and unblock peers, consistently moving the team toward shared delivery milestones.
- **Stack:** TypeScript, Node.js, AI agent frameworks, third-party API integrations

HubXP — Full Stack Developer

Nov 2023 – Feb 2025 · Remote

- Delivered a **financial asset management platform** for a banking client: built React-based portfolio and account-management pages, integrated upstream financial APIs, and shipped client-facing UI to production.
- Owned end-to-end work on a **construction & renovation management platform** spanning web (Next.js) and mobile (React Native) — designed, implemented, and refactored complete system features with **tRPC** providing type-safe contracts between clients and server.
- Built an **e-commerce app for a cosmetics retailer**: implemented the majority of the Next.js storefront, supported the React Native mobile companion, and established unit + integration test coverage that hardened the codebase against regressions.
- Maintained and extended the shared Next.js + tRPC + Prisma platform underpinning all three client products, balancing feature delivery with cross-cutting platform improvements.
- **Stack:** TypeScript, React, Next.js, React Native, tRPC, Prisma, Jest

ACT Digital — Full Stack Developer

Oct 2021 – Apr 2023 · Remote

- Contributed to a **healthcare scheduling platform** handling medical appointment and exam bookings for a major São Paulo hospital — built React-based scheduling interfaces used by patients and clinical staff.
- Supported **NestJS** backend endpoint development, working across REST APIs and **Prisma** data access to thread frontend features through to the database.
- Worked in **Scrum teams of 4–6 engineers**: participated in sprint planning, code review, and incremental delivery, coordinating closely with product and QA.
- **Stack**: TypeScript, React, Node.js, NestJS, Prisma, MySQL

Quality24 — Full Stack Developer

Apr 2019 – Mar 2020 · Remote

- Built portions of a **patient hospitalization attendance system** for a healthcare provider, spanning native **Android (Java)** bedside apps, a **Node.js** backend, and a **React** clinician-facing web frontend.
- Worked across mobile, web, and backend on a single product — modeling clinical data in **PostgreSQL** and integrating the three layers into a coherent end-user experience.
- **Stack**: Java (Android), Node.js, React, TypeScript, PostgreSQL

EDUCATION

Engineering — Universidade de São Paulo

2013 – 2018

- Relevant coursework: **software architecture, data structures & algorithms**, and adjacent software-engineering disciplines.
- Research scholarship — **FAPESP** (2016 – 2017): worked on **fluid simulation**, applying numerical methods and scientific computing.
- Research scholarship — **PIBIC** (2014 – 2015): implemented a **probabilistic algorithm** to analyze event relationships in critical systems.

LANGUAGES

- **Portuguese** — native
- **English** — advanced
- **French** — intermediate

COURSES

- **Rocketseat — Ignite** (2021): building full-stack applications
