Professional Summary

Full Stack Developer with 6+ years of experience designing, coding, testing, debugging, and deploying **production systems in TypeScript, Node.js, Next.js, and React Native**. Builds **component-oriented services in distributed, high-scale systems** — including **asynchronous messaging (AWS SQS/SNS, RabbitMQ)**, **PostgreSQL modeling and query optimization**, and **observability through structured logging and metrics**. Applies **SOLID and Clean Code** as daily practice, containerizes with **Docker**, and delivers through **CI/CD pipelines**. Experienced across **financial and fiscal-domain software — payment-gateway integration (Iugu, plugnotas)**, electronic invoicing, and high-volume e-commerce revenue paths — and, more recently, **AI agent integration** for business automation. Strong problem-solver with a track record of refactoring legacy systems and hardening critical paths under Agile/Scrum.

Skills

Frontend

- React
- Next.js
- React Native
- State (Redux, Context)

Backend

- Node.js
- tRPC
- Prisma (ORM)
- REST APIs
- NestJS
- Microservices / SOA
- Payments (Iugu)

Messaging & Architecture

- RabbitMQ
- AWS SQS/SNS
- Message queues
- Event-driven design
- Distributed systems

Languages

- TypeScript
- JavaScript
- SQL
- Kotlin
- Java (Android)

Cloud & DevOps

- Docker
- CI/CD
- Git
- GitHub
- Vercel
- AWS

Observability

- Sentry
- PostHog
- Structured logging

Data

- PostgreSQL
- MySQL

AI

- Gemini Flash
- Vercel AI SDK
- Mastra
- LLM-based agents
- Voice (speech-to-speech) agents
- LangChain
- retell.ai

Testing

- Jest
- Vitest
- Unit & integration testing
- Test-driven development

Practices

- SOLID
- Clean Code
- Debugging
- Refactoring
- Code review
- Agile/Scrum

Work History

Full Stack Developer, 07/2025 - 11/2026 · Remote
HubXP

- Contributed to **Afya Intelligence**, an AI learning platform for medical students at Afya: built a **speech-to-speech AI agent that simulates OSCE (Objective Structured Clinical Examination) patient interviews** so students can practice clinical interviewing by voice, plus a **multi-field CRUD form** for configuring each virtual patient; and a **real-time speech-to-speech tutor agent** with working **tool calls** that answers students' questions by querying Afya's **Whitebook** clinical-reference database.
- Designed and shipped **AI agent integrations** powering HubXP's flagship product, embedding **Gemini Flash** workflows via **Vercel AI SDK** / **Mastra** into existing client-facing features across web and mobile clients — **cutting ~6 hours/week** of manual operator work per client.
- Built and maintained a **Python** repository housing a **LangChain** agent supporting HubXP's AI workflows.
- Owned features end-to-end across the stack: **Next.js** + React frontends, **tRPC** + **Prisma** backend, and a shared **React Native** mobile app — type safety enforced from database schema through to UI.
- Authored **technical documentation** for AI-agent integration points to accelerate onboarding for new engineers.
- **Stack:** TypeScript, React, Next.js, tRPC, Prisma, React Native, Mastra, Vercel AI SDK, Gemini Flash, Python, LangChain, Vercel, Vitest, Agile/Scrum

Full Stack Developer, 02/2025 - 07/2025 · Remote
FutureSecureAi

- Engineered **Jack**, a production voice-based interview agent (**retell.ai**) for FutureSecureAi's commercial agent platform, automating a human-staffed workflow — designed to conduct phone screenings for open job positions and take on the *triagem* (screening) step of the hiring funnel, **handling 200+ screenings/month** at peak.
- Onboarded into a large, unfamiliar legacy codebase and integrated **8+ third-party APIs** — extending capability without destabilizing existing flows; debugged and resolved cross-system issues end-to-end.
- Collaborated across engineering to scope work with development managers, pair on hard problems, and unblock peers through code review and pair programming.
- **Stack:** TypeScript, Node.js, LangChain, Vercel AI SDK, Mastra, retell.ai, Gemini Flash, third-party API integrations

Full Stack Developer, 11/2023 - 02/2025 · Remote
HubXP

- Delivered **Toki** — a SaaS for construction and renovation companies to organize project data, media, and billing — owning end-to-end work across web (Next.js) and mobile (React Native), with **tRPC** providing type-safe contracts between clients and server; **integrated the Iugu payment gateway** for in-app billing. Onboarded **200+ companies**, with **1,000+ React Native installs** in production.
- Launched **Zuppy** — **financial/fiscal-domain software** for issuing Brazilian electronic invoices (*nota fiscal*) for high-volume digital-product sellers (*infoprodutores*) — integrating with the **plugnotas** billing provider to emit invoices reliably at scale. **Optimized the nota fiscal search SQL query, cutting response time from ~2 minutes to ~3 seconds (~40× faster)** on a database that has surpassed **1M nota fiscal records**; instrumented the product with **Sentry** (error tracking) and **PostHog** (product analytics) for observability.
- Contributed to **WePink**, an e-commerce platform for a cosmetics retailer serving **millions of customers** — led integration tests covering **campaign + multi-discount logic**, hardening a critical **payment/revenue path** the client specifically thanked the team for.
- Refactored **~8,000 lines** of legacy code — applying **SOLID and Clean Code** principles to replace buggy, hard-to-test modules with typed, testable units — **reducing recurring production defects by ~45%** and **lifting unit-test coverage from ~30% to ~75%** in the touched modules.
- Maintained and extended the shared **Next.js + tRPC + Prisma** platform underpinning all three products, managing shared client state with the **Context API** across web and mobile; deployed on **Vercel** via **CI/CD**,

balancing per-product delivery with cross-cutting platform improvements.

- **Stack:** TypeScript, React, Next.js, React Native, tRPC, Prisma, Vercel, Jest, Vitest, Agile/Scrum

Full Stack Developer, 10/2021 - 04/2023 · Remote
ACT Digital

- Contributed as a **full-stack developer** on a 4–6-engineer team building the **scheduling and calendar system for Hospital Israelita Albert Einstein** — one of Latin America's most prestigious private hospital networks — serving appointment and exam booking traffic at **~10M bookings/month** scale.
- Implemented **40+ React-based scheduling components** — with shared client state managed via **Redux** — used by patients and clinical staff; partnered with backend on **NestJS** + **Prisma** (ORM) REST APIs to wire features end-to-end across **30+ two-week sprints**.
- Used **asynchronous messaging (AWS SQS/SNS, RabbitMQ)** to decouple services and process booking/notification events at scale, and shipped through **containerized (Docker) CI/CD pipelines**.
- Operated under **Agile/Scrum**: sprint planning, code review, incremental delivery, close coordination with product and QA; evaluated user feedback and translated it into iterative program improvements.
- **Stack:** TypeScript, React, Redux, Node.js, NestJS, Prisma, MySQL, RabbitMQ, AWS SQS/SNS, Docker, CI/CD, Agile/Scrum

Full Stack Developer, 04/2019 - 03/2020 · Remote
Quality24

- Developed **Android (Java)** screens for a patient-bedside hospitalization-attendance system used in clinical workflows; shipped to an initial **100-device pilot rollout** with a healthcare provider.
- Authored **150+ unit tests** for the **Node.js + Postgraphile** (GraphQL-over-Postgres) backend, **lifting backend coverage to ~80%** and hardening regression safety as the team shipped new endpoints.
- **Stack:** Java (Android), Node.js, Postgraphile, GraphQL, PostgreSQL

Education

MBA in Applied AI Engineering, 06/2026 - 05/2027
UNIPDS - Anhanguera

- Postgraduate *Lato Sensu* program in applied AI engineering, prompt engineering, and generative-AI tooling.
- Training and applying **neural networks with TensorFlow.js** for image pattern recognition and user-behavior prediction.
- Using **AI tools to accelerate developer workflows**.

Mechatronics Engineering, 01/2013 - 12/2018
Universidade de São Paulo

- Relevant coursework: **software architecture**, **data structures & algorithms**, and adjacent software-engineering disciplines.
- Research scholarship — **FAPESP** (2016 – 2017): worked on **fluid simulation**, applying numerical methods and scientific computing.
- Research scholarship — **PIBIC** (2014 – 2015): implemented a **probabilistic algorithm** to analyze event relationships in critical systems.

Languages

Portuguese — native

English — advanced

French — intermediate

Career Break

Apr 2020 – Sep 2021

- Full-time caregiver for ill family member.

Courses

- **Rocketseat — Ignite** (2021): building full-stack applications
