Professional Summary

Product-minded engineer transitioning into **Product Management**, with 6+ years taking **B2B SaaS, healthcare, fiscal/payments, and AI products** from idea to production and adoption. Has owned products end-to-end — scoping with stakeholders, delivering across web and mobile, and instrumenting usage with **product analytics** — including **Toki** (**200+ companies onboarded**, **1,000+ mobile installs**) and **Zuppy** (electronic-invoicing platform past **1M invoice records**). Recently focused on **AI-agent products** that replace manual workflows: a voice screening agent handling **200+ interviews/month**, automations saving **~6 hours/week per client**, and voice-based learning tools for medical students. Brings the technical depth to turn business problems into feasible scope, negotiate trade-offs credibly with engineering, and judge what AI can realistically deliver. Currently pursuing an **MBA in Applied AI**.

Core Competencies

Product
End-to-end product ownership · 0→1 launches · scoping & prioritization with stakeholders · turning user feedback into iterations · product analytics (PostHog)

Delivery
Agile/Scrum (30+ sprints) · sprint planning · cross-functional work with engineering, QA & clients · technical documentation · quality & risk reduction on critical paths

AI Products
LLM & voice (speech-to-speech) agents · workflow automation · agent tool calling · AI feasibility assessment · Gemini, Vercel AI SDK, Mastra, LangChain, retell.ai

Domains
B2B SaaS · Healthcare & health-education · Fiscal / electronic invoicing · Payments (Iugu) · E-commerce · HR-tech (recruiting)

Technical Fluency
TypeScript, React, Next.js, React Native, Node.js · PostgreSQL / SQL · APIs & integrations (8+ third-party) · AWS, Docker, CI/CD

Monitoring & Quality
Sentry (error tracking) · PostHog (usage) · test strategy for revenue-critical flows · defect reduction

Work History

Full Stack Developer, 07/2025 - 11/2026 · Remote
HubXP

- **Afya Intelligence** (client: Afya, medical education): built two voice-first learning products for medical students — an **AI patient simulator for OSCE clinical-exam practice**, with a configuration form that lets educators define each virtual patient, and a **real-time voice tutor** that answers students' questions using Afya's **Whitebook** clinical-reference content.
- Shipped **AI-agent automations** into HubXP's flagship product across web and mobile, **removing ~6 hours/week of manual operator work per client**.
- Owned features end-to-end, from understanding the client need to production release across web, backend, and mobile; wrote **documentation** for the AI-agent integration points to speed up onboarding of new engineers.
- **Tech:** Next.js, React Native, tRPC, Prisma, Vercel AI SDK, Mastra, Gemini Flash, Python, LangChain

Full Stack Developer, 02/2025 - 07/2025 · Remote
FutureSecureAi

- Built **Jack**, a production **voice AI agent** that automated the candidate-screening (*triagem*) step of the hiring funnel — a previously human-staffed workflow — conducting **200+ phone screenings/month** at peak.

- Scoped work with development managers and integrated **8+ third-party APIs** into a large legacy platform without destabilizing existing customer flows.
- **Tech:** TypeScript, Node.js, retell.ai, LangChain, Vercel AI SDK, Mastra, Gemini Flash, MongoDB

Full Stack Developer, 11/2023 - 02/2025 · Remote
HubXP

- **Toki** — SaaS for construction and renovation companies to organize project data, media, and billing: owned delivery end-to-end across web and mobile, including **in-app billing via the Iugu payment gateway**. Reached **200+ companies onboarded** and **1,000+ mobile installs**.
- **Zuppy** — launched an electronic-invoicing (*nota fiscal*) product for high-volume digital-product sellers, integrated with the plugnotas provider. Cut **invoice search time from ~2 minutes to ~3 seconds (~40×)** on **1M+ invoice records**; set up **PostHog product analytics** and **Sentry** to track usage and errors; built an **AI onboarding chatbot** that guided new customers through account setup.
- **WePink** (cosmetics e-commerce, **millions of customers**): led test coverage for **campaign and multi-discount logic** on the revenue path — work the client specifically recognized.
- Refactored ~8,000 lines of buggy legacy code, **cutting recurring production defects by ~45%** and raising test coverage from ~30% to ~75% in the affected modules.
- **Tech:** Next.js, React Native, tRPC, Prisma, PostgreSQL, Vercel, PostHog, Sentry

Full Stack Developer, 10/2021 - 04/2023 · Remote
ACT Digital

- Member of a 4–6-engineer team building the **scheduling system for Hospital Israelita Albert Einstein**, handling **~10M appointment and exam bookings/month** for patients and clinical staff.
- Delivered **40+ scheduling features/components** over **30+ two-week sprints**, participating in sprint planning and working closely with product and QA.
- Reviewed **user feedback** and turned it into iterative improvements to the booking experience.
- **Tech:** React, Redux, NestJS, Prisma, MySQL, RabbitMQ, AWS SQS/SNS, Docker

Full Stack Developer, 04/2019 - 03/2020 · Remote
Quality24

- Built Android screens for a **bedside hospitalization-attendance product** used in clinical workflows, shipped to a **100-device pilot** with a healthcare provider.
- Raised backend test coverage to **~80%** (150+ tests), reducing regression risk as new features shipped.

Product Projects

Lontra Ágil — AI study companion for Brazilian public exams · In development, team project

- Covering **product definition**, the content-ingestion pipeline, and the AI evaluation loop for a platform that turns public-exam PDFs into auto-generated practice questions.

Voile Drift & **Vera** — Android apps published on Google Play

- Conceived, built, and published solo: an **AI calendar-insights app** (Gemini Flash finds relationships between logged events) and a **menstrual-cycle forecasting app**.

Education & Languages

MBA in Applied AI Engineering, 06/2026 - 05/2027
UNIPDS - Anhanguera

- Applied AI, prompt engineering, generative-AI tooling, and neural networks for user-behavior prediction.

Mechatronics Engineering, 01/2013 - 12/2018
Universidade de São Paulo

- Research scholarships: **FAPESP** (numerical simulation) and **PIBIC** (probabilistic analysis of critical systems).
- **Languages:** Portuguese (native) · English (advanced) · French (intermediate) | **Career break** (04/2020–09/2021): full-time family caregiver.
